it seems particularly appropriate that this pioneering collection of papers should be dedicated
to donald sholl since those of us who count measure and reconstruct elements of the neural
en emble are all very much in his debt sholl was certainly not the first to attempt
quantification of certain aspects of brain structure no computers were available to him for the
kind of answers he sought and some of his answers or rather his interpretations may not
stand the test of time but we remember him because of the questions he asked and for the

reasons he asked them at a time when the entire family of golgi techniques was in almost total eclipse he had the judgment to rely on them and in a period when the canonical neuron was a perfect sphere the enormous dendritic superstructure being almost forgotten he was one of a very few who looked to dendrite extension and pattern as a prime clue to the overall problem of neuronal connectivity
