this book provides a comprehensive account of a modern generalisation of differential geometry in which coordinates need

not commute this requires a reinvention of differential geometry that refers only to the coordinate algebra now possibly noncommutative rather than to actual points such a theory is needed for the geometry of hopf algebras or quantum groups which provide key examples as well as in physics to model quantum gravity effects in the form of quantum spacetime the mathematical formalism can be applied to any algebra and includes graph geometry and a lie theory of finite groups even the algebra of 2 x 2 matrices turns out to admit a rich moduli of quantum riemannian geometries the approach taken is a bottom up one in which the different layers of geometry are built up in succession starting from differential forms and proceeding up to the notion of a quantum levi civita bimodule connection geometric laplacians and in some cases dirac operators the book also covers elements of connes approach to the subject coming from cyclic cohomology and spectral triples other topics include various other cohomology theories holomorphic structures and noncommutative d modules a unique feature of the book is its constructive approach and its wealth of examples drawn from a large body of literature in mathematical physics now put on a firm algebraic footing including exercises with solutions it can be used as a textbook for advanced courses as well as a reference for researchers

reading and writing in the mathematics classroom features suggestions and activities for including reading and writing as an integral part of the mathematics curriculum it also includes suggestions for differentiated approaches to teaching mathematics for the english language learners and inclusion students

mathematics across cultures a history of non western mathematics consists of essays dealing with the mathematical knowledge and beliefs of cultures outside the united states and europe in addition to articles surveying islamic chinese native american aboriginal australian inca egyptian and african mathematics among others the book includes essays on rationality logic and mathematics and the transfer of knowledge from east to west the essays address the connections between science and culture and relate the mathematical practices to the cultures which produced them each essay is well illustrated and contains an extensive bibliography because the geographic range is global the book fills a gap in both the history of science and in cultural studies it should find a place on the bookshelves of advanced undergraduate students graduate students and scholars as well as in libraries serving those groups

this workbook reinforces skills and minimizes frustration for students in any math class lab or study skills course offering a wealth of proven study tips and sound advice on note taking time management and reducing math anxiety the author

makes the learning process both manageable and compelling in addition numerous opportunities for self assessment enable students to track their own progress
